Guardian Strategy Validation Report*

Strategy Name: **Euro 2 v1.1**

Pro Generation Strategy Design

Currency Pair: EUR USD

Testing Period: 01-01-2022 to 09-05-2025

Overview

The EURO2 strategy for EURUSD on the M5/H1 timeframe has undergone extensive backtesting and analysis. Each strategy is subject to rigorous tests involving over 100 hours of computer-based evaluation to ensure its robustness and viability.

STATS

### Strategy

Wins / Losses Ratio	2.12	Payout Ratio (Avg Win/Loss)	0.92	Average # of Bars in Trade	133.38
AHPR	6.56	Z-Score	1.06	Z-Probability	14.46 %
Expectancy	16.2	Deviation	$ 50.78	Exposure	2.04 %
Stagnation in Days	86	Stagnation in %	7.14 %		

Trades

		# of Wins	110	# of Losses	52	# of Cancelled/Expired	0
Gross Profit	$ 5368.62	Gross Loss	$ 2744.46	Average Win	$ 48.81	Average Loss	$ 52.78
Largest Win	$ 75.31	Largest Loss	$ -64.26	Max Consec Wins	8	Max Consec Losses	4
Avg Consec Wins	2.82	Avg Consec Loss	1.37	Avg # of Bars in Wins	137.74	Avg # of Bars in Losses	124.15

Trading Analysis

Euro 2 v1.1 ProGen is a precision scalping EA for EUR/USD, optimized for the M5 and H1 timeframes. It uses a combination of **CCI crossovers**, **ATR-based spike detection**, and **ADX decline signals** to pinpoint short-term price reversals and momentum shifts. Trade entries are triggered when specific volatility and trend conditions are met, aiming to capitalize on quick intraday price movements. The EA employs a tight stop loss and profit target setup, along with a trailing stop mechanism that activates after a modest profit threshold is reached, enhancing trade protection and yield. This strategy is tailored for fast-paced market environments with frequent but controlled trade opportunities.

Equity Chart

The following chart demonstrates the equity growth over time, highlighting the strategy's performance during the backtesting period.

Comprehensive Trade Analysis

This section summarizes key performance metrics such as win rate, profit factor, and maximum drawdown, ensuring the strategy's effectiveness.

Monte Carlo Simulation

To ensure the robustness and reliability of this trading strategy, a Monte Carlo simulation was conducted. This method involves running numerous randomized simulations to account for variability in market conditions, trade sequences, and potential slippage. The simulation confirms consistent profitability across randomized scenarios, reinforcing the strategy's resilience.
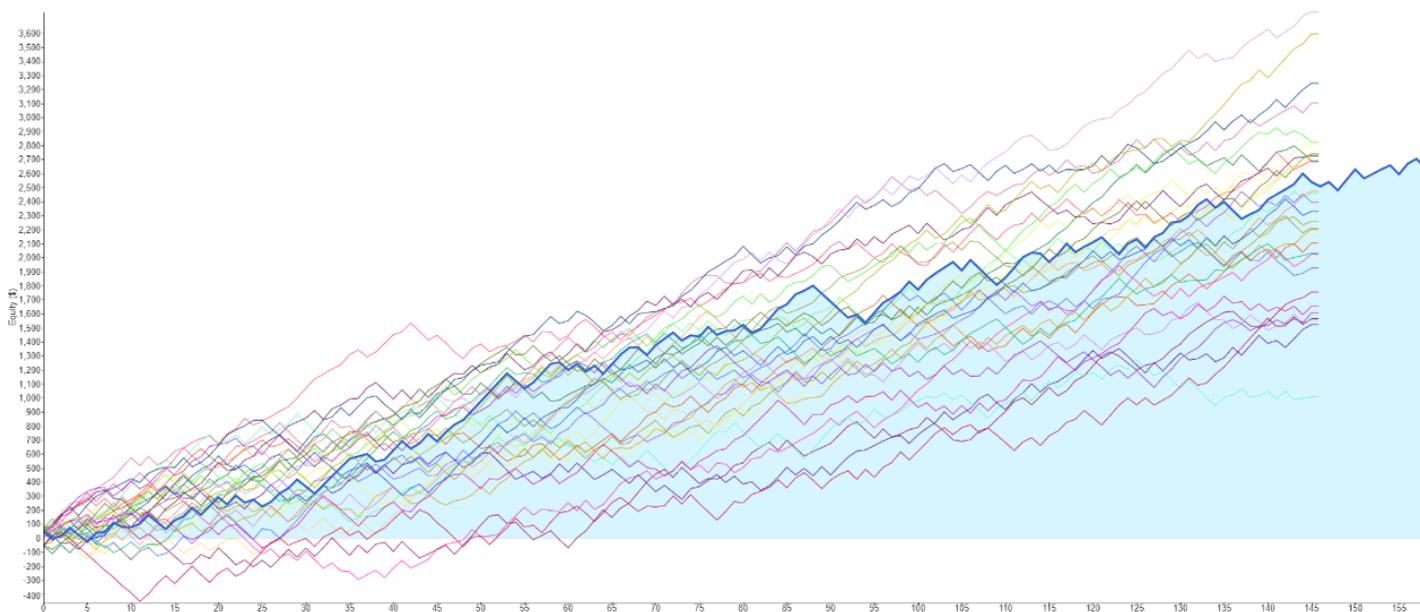

Metatrader 4 Backtest

To double check the authenticity of our original backtests, we also run it on a high quality tick data Metatrader 4 backtest to compare the results and confirm the strategy is viable. This is important as we are running the software on the Metatrader platforms in real life so we have to ensure it trades correctly on this platform. The results from both platforms have to be virtually identical for a strategy to pass.
